

ABOUT ME

I'm a full stack developer with extensive experience in creating web pages, web shops, web apps, e-commerce systems, online payment gateways, REST web services, javascript based mobile apps and complex microservice based backend systems

I'm proficient in designing, developing and maintaining applications and solutions for a broad range of corporate, start-up and public sector clients and having the enthusiasm and ambition to complete projects to the highest standard.

Teaching and coaching developers is part of my daily routine. As founder and former CTO of Recart, I built a 9-membered developer team.

Besides development, I'm also a big fan of continuous delivery and automation.

Although we have built a successful startup from zero to break even, I haven't felt satisfied using all my resources creating a marketing tool. Now I'm searching for an opportunity where my work has a real impact on making the world a better place.

EXPERIENCES

CTO, Co-Founder

2015 -

Recart

Recart helps ecommerce merchants selling more with their store.

As a co-founder and CTO I was involved in almost all process, but here is what im most proud of:

- Designed and developed a highly scalable, fault tolerant microservice based distributed architecture with more than 60 services what was used by thousands of customers and was serving requests for tens of millions of end users.
- Hired and coached more than 10 developers, some of them were freshmen, one of them couldn't even code when joined our team.
- Built an engaging company culture what was competitive with big companies even though our salaries weren't.
- Did a lot of research and experiment how we can design, test, deploy, maintain, and monitor microservice/distributed architectures and did best practices upon them.

Senior Software Engineer

2014 -

Telipost

Telipost is basically an UBER clone made for the Hungarian Taxi market. It was connecting the drivers with the passengers without a third party.

As only inhouse developer in the project my role was to develop the backend and coordinate the digital agency who was responsible for the native iOS and Android App.

Later we decided to bring the mobile clients also inhouse, so I developed a hybrid multiplatform mobile app.

Developer

2013 -

Thatamfour

Thatamfour is basically the European version of Roadtrippers.com.

Developer

2009 -

Amazon, London

Dot com works is a web development agency founded by me had several projects like: Developinggroupon clone, developing wide range of facebook applications, e-commerce systems, payment gateways, Bitcoin based gambling site, dating sites.
